BUG-001 : Invalid Lower Boundary Mobile Number Accepted at Authentication Entry Point

Bug Details

- **Bug ID:** BUG-001
- **Module:** Authentication Entry Point / Mobile Number Validation
- **Project:** AJIO Web – E-commerce Purchase Flow (Portfolio Project)

Description

The system accepts an invalid Indian mobile number below the defined lower boundary and allows the user to proceed without displaying any validation message. As a result, the user is incorrectly routed to the Registration screen. As per the acceptance criteria, only 10-digit mobile numbers starting with digits 6–9 are considered valid.

Environment

- Application: AJIO Web (https://www.ajio.com)
- Browser: Chrome v121
- OS: Windows 10
- User Type: Logged-out user

Preconditions

- Application is launched and accessible
- User has clicked on **Sign in / Join AJIO**
- User is on the mobile number entry screen

Test Data

- Mobile Number Entered: **5999999999**

Steps to Reproduce

1. Enter the mobile number **5999999999** on the mobile number entry screen
2. Click on **Continue**

Expected Result

- System should display a validation message indicating an invalid mobile number
- User should remain on the mobile number entry screen

Actual Result

- No validation message is displayed
- User is allowed to proceed to the Registration screen

Severity

High

Priority

High

Impact

- Boundary value validation rules are violated
- Invalid mobile numbers are accepted silently
- User flow is incorrectly branched
- Can lead to invalid user onboarding and data integrity issues
