BHAGYASHREE ACHARYA

QA Tester · Manual & Automation · ISTQB Certified

8208925071 | bhag195naid@gmail.com | Pune | LinkedIn · GitHub · Portfolio

ISTQB Certified	QA Internship	Selenium + Java	Amazon & Wipro
Foundation Level · Jan 2026	Prodigy InfoTech	TestNG · POM · Maven	Functional Validation

PROFESSIONAL SUMMARY

ISTQB CTFL- certified QA Tester with real time experience in **manual testing, API testing, and Selenium automation**. Complemented by a background in functional validation and defect investigation at Amazon and Wipro — validating application behaviour, reproducing bugs, and collaborating with dev teams. Strong in end-to-end test case design, RTM creation, and scenario-driven testing. I bring structured testing, strong root-cause analysis, and a sharp understanding of user and business workflows.

TECHNICAL SKILLS

Manual QA	Test Case Design · RTM · Defect Lifecycle · Functional · Regression · Smoke/Sanity · BVA · Root Cause Analysis
Automation	Selenium WebDriver (Java) · TestNG · Page Object Model · Maven · Data-Driven Testing
API & Perf	Postman · REST API (GET/POST/PUT/DELETE) · JMeter · Load & Stress Testing
Database	SQL · MySQL · SQL Server · CRUD · Joins · Data Validation Queries
Tools	JIRA · Git · GitHub · BrowserStack · Zephyr · Cypress · IntelliJ IDEA
Process	Agile/Scrum · SDLC · STLC · SOP Development · Cross-functional Collaboration

EXPERIENCE

QA Intern [QA Testing] — *Aug 2025 – Nov 2025*
Prodigy InfoTech *Pune*

- **Executed 80+ test cases** across end-to-end WooCommerce flows (browse → checkout) — uncovering UI and functional defects across Chrome, Firefox, Edge, and mobile via BrowserStack.
- **Designed scenario-based test coverage** spanning positive, negative, and edge cases; applied boundary value analysis to maximise defect detection on critical user paths.
- **Built a Selenium (Java + TestNG) automation framework** using Page Object Model — automating login and checkout workflows and reducing manual regression effort.
- **Identified and tracked 25+ defects** in JIRA with detailed reproduction steps, severity, and priority; drove retesting cycles through to verified closure.

Sr. Associate [Functional Validation & Defect Support] — *May 2021 – Aug 2023*
Amazon Development Centre (India) *Remote*

- **Validated Seller Central workflows** (listings, pricing, catalog data) against business rules — ensuring data accuracy across high-volume live production systems.
- **Identified, reproduced, and escalated defects** with detailed written reports, enabling dev teams to diagnose and resolve production issues faster.
- **Conducted root cause analysis** on recurring failures — pinpointing patterns in pricing, inventory, and content updates to prevent repeat defects.
- **Resolved 150+ weekly seller cases** while consistently meeting SLA targets; collaborated across remote cross-functional teams to close issues end-to-end.
- Diagnosed catalogue failures using Amazon's **weighted content-score model** (seller/brand/catalogue tiers) — isolating root causes before escalation and ensuring only high-signal, reproducible bugs reached dev teams.
- Identified a recurring bulk feed upload failure pattern; escalated via Gemba, contributed to an **SOP revision that measurably reduced bulk listing failures** — recognised by senior management for process improvement.
- Validated ASIN storefront display, stock-state transitions, GTIN exemption, A+ listing workflows, and secure login — all defects logged with severity, priority, and reproduction steps.

Associate – Openreach Project [Application Validation & Defect Investigation] — *Nov 2019 – Apr 2020*
Wipro Ltd. *Pune*

- Validated Openreach telecom management software against **live network hardware** (DPs, optical fibre) — testing bandwidth control, switching, and sync-status functions against real field state confirmed by on-site engineers.
- Identified hardware-software discrepancies and logged defects with step-by-step reproduction details; performed **post-fix verification** to confirm full system alignment after each resolution.

PROJECTS

AJIO E-Commerce — Manual Testing
GitHub ↗
Manual · RTM · JIRA · BVA

- Designed end-to-end test scenarios (Registration → Payment) with full RTM traceability from requirements to sign-off
- Applied BVA and equivalence partitioning; logged defects with severity/priority — simulating a real-world QA lifecycle

SauceDemo — Automation Framework
GitHub ↗
Selenium · TestNG · Maven · POM

- Built a POM-based framework automating login, cart, and checkout — enabling data-driven test execution across multiple user scenarios
- Structured reusable page classes to improve maintainability and reduce test duplication

Fakestore — Performance Testing
GitHub ↗
JMeter · Load & Stress Testing

- Designed JMeter test plans simulating concurrent user loads — measuring response time, throughput, and error rates under stress
- Identified performance bottlenecks and documented findings to establish baseline thresholds

API & Database Testing Suite
API GitHub ↗ · SQL GitHub ↗
Postman · REST API · MySQL · SQL Server

- Created Postman collections validating GET/POST/PUT/DELETE endpoints — verifying response codes, payloads, and error handling
- Wrote SQL queries to validate backend data integrity, relational constraints, and schema consistency

EDUCATION

MCA — Manipal University Jaipur *2021–2024*
M.Sc. Anthropology — University of Pune *2014–2016*
B.Sc. Chemistry — Bhimthadi Shikshan Sanstha Science College *2011–2014*

CERTIFICATIONS

✓ **ISTQB® Certified Tester Foundation Level (CTFL)** *Jan 2026*
✓ Internshala Certificate of Training — Software Testing *Jul 2025*
✓ Diploma in Java Programming — Mindscripts Technology *2023*
