ISTQB Certified	QA Internship	Selenium + Java	Amazon & Wipro
Foundation Level · Jan 2026	Prodigy InfoTech	TestNG · POM · Maven	Functional Validation

PROFESSIONAL SUMMARY

ISTQB CTFL-certified QA Tester with hands-on internship experience in **manual testing, API testing, and Selenium automation**. Complemented by a background in functional validation and defect investigation at Amazon and Wipro — validating application behaviour, reproducing bugs, and collaborating with dev teams. Strong in end-to-end test case design, RTM creation, and scenario-driven testing. I bring structured testing, strong root-cause analysis, and a sharp understanding of user and business workflows.

TECHNICAL SKILLS

Core QA: Manual Testing • Test Case Design • RTM • Defect Lifecycle • Functional • Regression • Smoke/Sanity • JIRA
Automation: Selenium WebDriver (Java) • TestNG • Page Object Model (POM) • Maven • Data-Driven Testing
API & Perf: Postman • REST API (GET/POST/PUT/DELETE) • JMeter • Load & Stress Testing
Database: SQL • MySQL • SQL Server • CRUD • Joins • Data Validation
Tools: JIRA • Git • GitHub • Cypress • BrowserStack • Zephyr • IntelliJ • IntelliJ
Methodology: Agile / Scrum • SDLC • STLC • Cross-functional Collaboration

EXPERIENCE

QA Intern [QA Testing] — *Aug 2025 – Nov 2025*
Prodigy InfoTech *Pune*

- **Executed 80+ test cases** across end-to-end WooCommerce flows (browse → checkout) — uncovering UI and functional defects across Chrome, Firefox, Edge, and mobile via BrowserStack.
- **Designed scenario-based test coverage** spanning positive, negative, and edge cases; applied boundary value analysis to maximise defect detection on critical user paths.
- **Built a Selenium (Java + TestNG) automation framework** using Page Object Model — automating login and checkout workflows and reducing manual regression effort.
- **Identified and tracked 25+ defects** in JIRA with detailed reproduction steps, severity, and priority; drove retesting cycles through to verified closure.

Sr. Associate [Functional Validation & Defect Support] — *May 2021 – Aug 2023*
Amazon Development Centre (India) *Remote*

- **Validated Seller Central workflows** (listings, pricing, catalog data) against business rules — ensuring data accuracy across high-volume live production systems.
- **Identified, reproduced, and escalated defects** with detailed written reports, enabling dev teams to diagnose and resolve production issues faster.
- **Conducted root cause analysis** on recurring failures — pinpointing patterns in pricing, inventory, and content updates to prevent repeat defects.
- **Resolved 150+ weekly seller cases** while consistently meeting SLA targets; collaborated across remote cross-functional teams to close issues end-to-end.

Associate – Openreach Project [Application Validation & Defect Investigation] — *Nov 2019 – Apr 2020*
Wipro Ltd. *Pune*

- **Verified application behaviour** against real-time network hardware — identifying hardware-software discrepancies and logging defects with precise step-by-step reproduction details.
- **Investigated and resolved defects** in collaboration with technical teams; performed post-fix verification to confirm full system alignment after each resolution.

PROJECTS

AJIO E-Commerce — Manual Testing
GitHub ↗
Manual · RTM · JIRA · BVA

- Designed end-to-end test scenarios (Registration → Payment) with full RTM traceability from requirements to sign-off

SauceDemo — Automation Framework
GitHub ↗
Selenium · TestNG · Maven · POM

- Built a POM-based framework automating login, cart, and checkout — enabling data-driven test execution across multiple user scenarios

- Applied BVA and equivalence partitioning; logged defects with severity/priority — simulating a real-world QA lifecycle
- Structured reusable page classes to improve maintainability and reduce test duplication

Fakestore — Performance Testing

GitHub ↗

JMeter · Load & Stress Testing

- Designed JMeter test plans simulating concurrent user loads — measuring response time, throughput, and error rates under stress
- Identified performance bottlenecks and documented findings to establish baseline thresholds

API & Database Testing Suite

API GitHub ↗ · SQL GitHub ↗

Postman · REST API · MySQL · SQL Server

- Created Postman collections validating GET/POST/PUT/DELETE endpoints — verifying response codes, payloads, and error handling
- Wrote SQL queries to validate backend data integrity, relational constraints, and schema consistency

EDUCATION

MCA — Manipal University Jaipur *2021–2024*

M.Sc. Anthropology — University of Pune *2014–2016*

B.Sc. Chemistry — Bhimthadi Shikshan Sanstha Science College *2011–2014*

CERTIFICATIONS

✓ **ISTQB® Certified Tester Foundation Level (CTFL)** *Jan 2026*

✓ Internshala Certificate of Training — Software Testing *Jul 2025*

✓ Diploma in Java Programming — Mindscripts Technology *2023*
